

Waste Management Plan

VERSION 1.0	EFFECTIVE 	NEXT REVIEW 	OWNER 	APPROVED BY
----------------	--------------------------	----------------------------	----------------------	----------------------------

Read with the Waste Management Policy. This plan identifies the waste streams may generate, how each is managed on site, the required container and bin colours (Australian Standard AS 4123.7), and the off-site disposal method. Confirm requirements against current State legislation and your licensed contractor. Complete the site details and add any site-specific streams.

Site / workplace		Licensed waste contractor	
------------------	-------------	---------------------------	-------------

WASTE TYPE	DESCRIPTION & EXAMPLES	ON-SITE MANAGEMENT	CONTAINER / BIN COLOURS (AS 4123.7)	OFF-SITE DISPOSAL METHOD
General waste	Waste with no potential to cause sharps injury, infection or hazard — e.g. incontinence pads, sanitary waste, non-contaminated packaging, instruments, trays and unused materials.	Dispose in the general-waste container.	Body: dark green or black · Lid: red or black	Landfill (domestic waste stream).
Commingled recyclables	Materials that can be remanufactured or reused — glass bottles, aluminium and steel cans, milk cartons, clean paper.	Dispose in the commingled recycling container.	Body: dark green or black · Lid: yellow	Materials recycling facility.
Cardboard & paper	Packaging composed of cardboard — plain and waxed boxes, inserts.	Flatten and store in the cardboard area or compactor.	Body: dark green or black · Lid: blue	Paper and cardboard recycling facility.
E-waste	Obsolete computer, electronic or hardware waste — computer parts, printers, photocopiers, monitors, cables.	Store until collection in a skip or cage.	Body: dark green or black · Lid: white	E-waste recycler.
Clinical waste	Waste that could cause a sharps injury, infection or disease — human tissue, and gloves or dressings containing blood or body substances.	Dispose in a clinical-waste container, bucket or bag.	Body / lid / bag: yellow · Black biohazard symbol · Marked "Clinical waste"	Treatment or disposal at a licensed premises.
Sharps	Any object capable of a penetrating injury — needles, IV sets, pipettes, broken glassware.	Place directly into an approved puncture-resistant sharps container; never pick up by hand; do not overfill.	Yellow rigid container · Biohazard symbol · Marked "Sharps"	Treatment or disposal at a licensed premises.
Cytotoxic waste	Equipment and materials that may be contaminated with a cytotoxic drug during preparation, transport or administration.	Dispose in a rigid cytotoxic-waste container.	Purple rigid container / lid / bag · Telophase-cell symbol · Marked "Cytotoxic"	Collection by an EPA-licensed contractor for incineration at a licensed facility.
Pharmaceutical waste	Expired or discarded pharmaceuticals, and materials contaminated by pharmaceutical products.	Store securely; keep separate from participant medication.	Per pharmacy / contractor requirements	Return to a pharmacy or licensed contractor.

WASTE TYPE	DESCRIPTION & EXAMPLES	ON-SITE MANAGEMENT	CONTAINER / BIN COLOURS (AS 4123.7)	OFF-SITE DISPOSAL METHOD
Chemical waste	Waste from the use of chemicals in medical, domestic-services or maintenance applications.	Controlled release to sewer only in accordance with a trade waste agreement; otherwise store for collection.	Per contractor requirements	Licensed transporter / treater (check the prescribed industrial waste database).

Packaging, instruments, trays and unused materials are disposed of as general waste unless contaminated.
