

Risk Management Policy

VERSION 1.0	EFFECTIVE	NEXT REVIEW	OWNER Principal / Key Management Personnel	APPROVED BY Governing body
-----------------------	-----------	-------------	--	--------------------------------------

PURPOSE AT A GLANCE

This policy explains how [] identifies, analyses, prioritises and treats risks to participants, workers and the organisation — through a documented risk management system covering incidents, complaints, finance, governance, HR, information management, work health and safety, emergency and disaster management, and infection control.

1. Purpose and scope

This policy supports [] to apply the Risk Management NDIS Practice Standard. It applies to all services and supports delivered by [] and to all employees, contractors and volunteers (**Workers**), who must take full responsibility for understanding and following it. It should be read alongside the related documents in the final section and the corresponding procedures in the Policy Register.

2. Policy aims

[] is committed to ensuring that:

- risks to the organisation — including risks to participants, financial and work health and safety risks, and risks associated with the provision of support — are identified, analysed, prioritised and treated;
- a documented risk management system that effectively manages identified risks is in place, proportionate to the size and scale of the provider and the scope and complexity of support, and covering incident management, complaints, financial management, governance, HR, information management, work health and safety, and emergency and disaster management (and, where relevant, infection prevention and control); and
- supports are provided consistently with the risk management system, and appropriate insurance — professional indemnity, public liability and accident insurance — is in place.

3. A risk-aware culture

Risk management is an essential part of []'s culture. [] does what is reasonably practicable to ensure workers, participants and others are not harmed by risks associated with the provision of support, and commits sufficient resources to manage risks effectively. Risk management processes are conducted across all aspects of the organisation and its operations, and risks and the plans to manage them are documented in the Risk Register.

4. The four-step process

Strategies to control identified risks are reviewed alongside each scheduled review of this policy, using four steps: **identify** potential risks through a review of the organisation; **assess** the likelihood and consequence of

each risk using the risk matrix; **control** — action appropriate measures to eliminate or minimise each hazard, working through the hierarchy of control; and **review** the effectiveness of the controls, making changes when required. Work health and safety risks are managed under the Work Health and Safety Policy, and infection risks under the Infection Control Policy.

5. Reporting, insurance and improvement

Workers must report all hazards and incidents as soon as reasonably practicable — injuries to participants or workers, emergency situations, and near-misses where there is no injury but preventative action is required — and all incidents are recorded in the Incident Register. [] obtains and maintains adequate insurance, including public liability, professional indemnity and workers compensation. Internal audits under the Quality Management and Continuous Improvement Policy review the effectiveness of the controls, and all feedback about risk management is welcomed, including anonymously.

6. Definitions

[]
[], ABN [].

Client

A client of [], including an NDIS participant.

Key Management Personnel (KMP)

[], and other key management personnel involved in [] from time to time.

Principal

[].

Legislation Register

The register of legislation, regulations, rules and guidelines maintained by [].

Policy Register

The register of policies of [].

Worker

A permanent, fixed-term or casual member of staff, a contractor or a volunteer engaged by [], including the Principal.

Risk management

A process whereby hazards are identified, the risks associated with each hazard are assessed, and control measures that will eliminate or minimise the risk of injury are planned and implemented.

Reasonably practicable

That which is reasonably able to be done to ensure health and safety, weighing the likelihood of the hazard occurring, the degree of harm, what is known about the hazard and ways to eliminate or minimise it, the availability and suitability of those ways, and whether the cost is grossly disproportionate to the risk.
